E-WASTE MANAGEMENT · ASSIGNMENT 1 (E)

State E-Waste Tracker

Built with Excel · Uttar Pradesh Case Study

NAME	ROLL NO.	CLASS	SEMESTER

About This Assignment

This assignment applies core Excel skills — structured worksheets, formulas, conditional formatting, and pivot-style summarization — to a real-world sustainability problem: **e-waste management in Uttar Pradesh**. Using the **State E-Waste Tracker** workbook, the assignment builds a 7-category dataset covering generation and inventory, collection performance, formal recycling infrastructure, regulatory (EPR) compliance, informal-sector integration, environmental and health safeguards, and public awareness — combined into a single 100-point composite scorecard.

Beyond the spreadsheet itself, the same data has been carried forward into a written analytical report and an interactive web dashboard, so the underlying numbers, the narrative interpretation, and the visual presentation can all be checked against one another. All three deliverables are linked below.

Assignment Deliverables

1. Excel Workbook

State_EWaste_Tracker_Final.xlsx

Raw data, formulas, and the 7-category scorecard calculation.

2. Analytical Report and Source code

https://drive.google.com/file/d/1LDNdLXsUMU4E8s6lTZfpJRWrbVziHOgp/view?usp=sharing

github.com/kasim672/ewaste-dashboard

Written validation report interpreting the workbook's findings.

3. Online Dashboard

ewaste-management-dashboard.vercel.app

Interactive, tab-based visualization of the same dataset.
