Mini-Task: E-Waste Registration & Recycling Target Calculator

Course: Computer Engineering, Third Year **Duration:** 3–5 days **Team Size:** 1–2 students

1. Background

Under India's **E-Waste (Management) Rules, 2022**, electronics companies like **Dixon Technologies, Kaynes Technology, Foxconn India, Tata Electronics, Centum, Avalon, VVDN, Syrma SGS, Sahasra, and Elin** must register as either a **Manufacturer, Producer, Recycler, or Refurbisher**, and must recycle a certain **percentage of their e-waste** every year (their "EPR target").

You will build a small program/app that stores this data and does the target calculation automatically.

2. Task

Build a simple app (console app, spreadsheet, or basic web form — your choice) that does the following:

Step 1 — Registration Form

Take input for a company:

Company Name (e.g., Dixon Technologies, Foxconn India, Tata Electronics — use these as your sample data)
Entity Type: Manufacturer / Producer / Recycler / Refurbisher
Annual E-Waste generated or handled (in MT — metric tonnes)

Store 5 sample companies using the names from the reference list above.

Step 2 — EPR Target Calculator

Given a Financial Year, calculate how much e-waste (in MT) that company is legally required to recycle, using this rule:

Financial Year	Target %
2023–24 or 2024–25	60%
2025–26 or 2026–27	70%
2027–28 onward	80%

Formula: `Target (MT) = Annual E-Waste Generated × Target %`

Step 3 — Registration Fee Lookup

Based on the company's annual recycling target (in MT), look up and display the registration fee using this table:

Target (MT)	Fee (₹)
Less than 50	2,500
50 to under 100	7,500
100 to under 1000	1,50,000
1000 to under 5000	10,00,000
More than 5000	15,00,000

Step 4 — Simple Output Report

For each company, print/display:

Name, Type
Annual E-Waste Generated
EPR Target (MT) for the selected year
Registration Fee (₹)

Compliance Status: "Compliant" if actual recycled ≥ target, else "Non-Compliant" (take actual-recycled as a second input)

3. Deliverables

Working program/app (any language, or even Excel with formulas)
Sample output for the 5 companies
A short paragraph (5–6 lines) explaining which rule/clause each calculation is based on

4. Evaluation

Criteria	Weight
Correct EPR target calculation	30%
Correct fee lookup logic	25%
Clean input/output	25%
Explanation of rules used	20%

5. Source

Based on the CPCB FAQ on the E-Waste (Management) Rules, 2022 (recycling targets and fee structure sections).
